

# Lost and Found

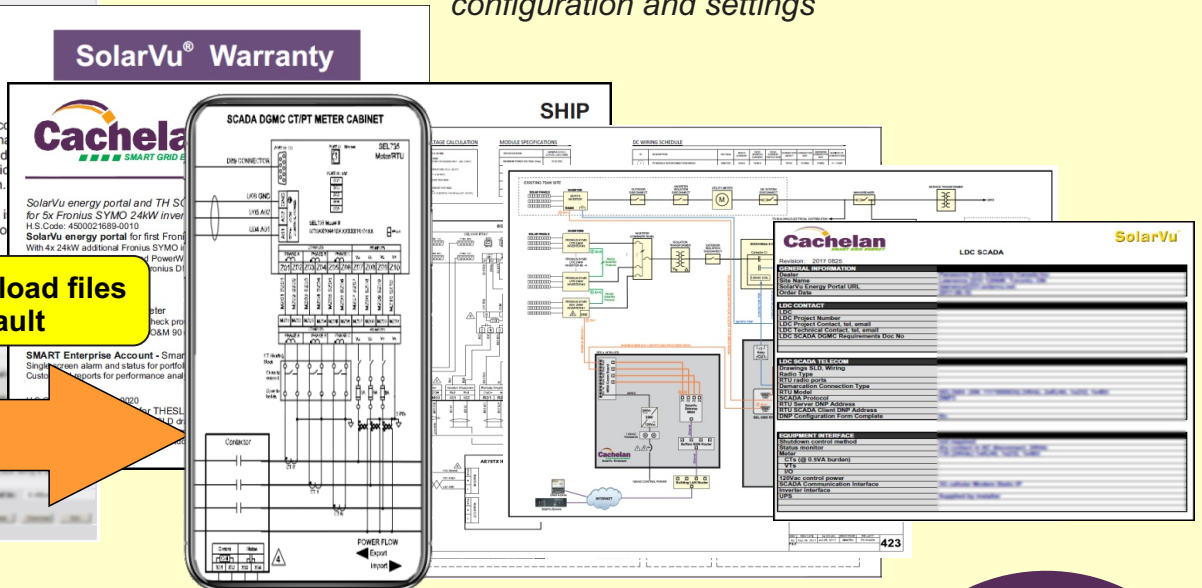

Documents that are filed on project completion are available online for the project lifetime from the SolarVu Vault

After completion of a solar project, design drawings are filed away and forgotten. A few years later O&M staff show up on site to fix problems but have no documents of the system design available. Expensive time is wasted trying to understand the system by visual inspection before repairs can be done.

Every SolarVu portal includes lifetime cloud storage called the Vault for uploading design docs like SLDs, wiring diagrams, panel strings layout, equipment communication settings, network configuration, warranty certificates and manuals. Staff can access documents from their smart phone on site, to quickly assess where to look to be more productive in restoring operation. While it is best that these records be added to a new SolarVu portal, files can be uploaded at any time on existing systems.

Online access to typical system files including commercial records, SLDs, wiring diagrams, network configuration and settings

WebFilm Vault password protected cloud access to system drawings and records is included with a SurePoint subscription.
